## Let's Play The Stations!

Want to keep in touch with the world? Always tune in to the music of your own taste or listen to the latest local or international news? Then here is what you need: FlexBridgeRadio brings the universe of internet radio to your Windows PC!

### The Universe Of Internet Radio!

With FlexBridgeRadio, you have access to nearly 12,000 streaming radio stations from more than 100 countries worldwide. You can browse the database by country, language and genre, search for station names and even descriptions. And you can play any station directly with FlexBridgeRadio, no separate player software is required.

### Two Flavours To Suit Your Needs!

FlexBridgeRadio is available in two different flavours. The SilverEdition comes with support for a single SoundBridge at a time and manual configuration of your devices. The GoldEdition offers automatic detection of all SoundBridges in your local network and support for multiple SoundBridges.

### A Radio In Your Pocket!

FlexBridgeRadio was designed to be portable, therefore no complicated installation is required. Simply extract FlexBridgeRadio from the ZIP-file it comes in and copy the files to any folder on any hard disk of your system. You can even put FlexBridgeRadio on a USB stick or memory card to use it on different computers, for example at home and at work.

### Portable Favourites!

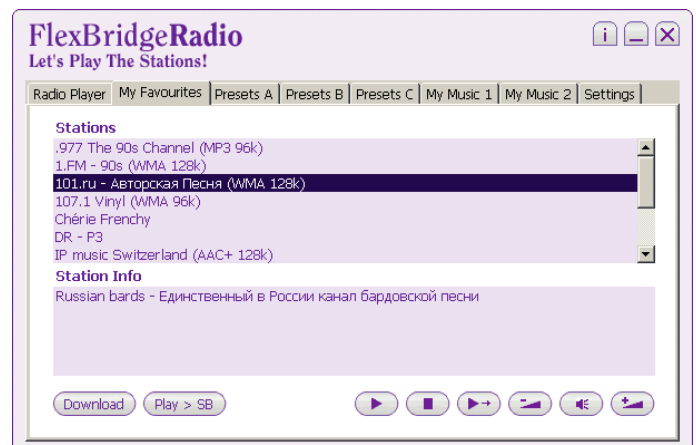

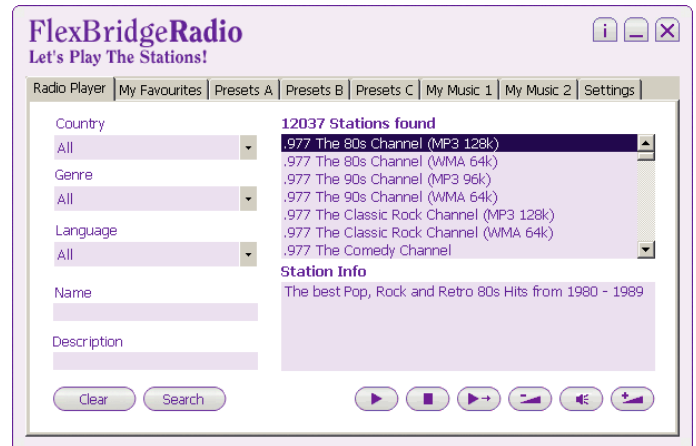

FlexBridgeRadio is based on Radio Roku, the comprehensive guide to internet radio developed and run by Roku™, manufacturers of the famous SoundBridge™ media adapters. This makes FlexBridgeRadio the perfect companion for your SoundBridge™. If you are a registered user of Radio Roku, you can download your Favourites and store them locally on a hard disk or USB stick. So even when you do not have access to Radio Roku or when Radio Roku is down, you can still play your favourite stations on your SoundBridge™ or your computer. FlexBridgeRadio GoldEdition even assists you in managing your Favourites: With one single mouse click you can add Favourites to your Radio Roku account or remove a Favourite from the list.

### Flexible Presets!

FlexBridgeRadio lets you store 18 Presets which you can use for different purposes. With one single mouse click FlexBridgeRadio downloads your SoundBridge's Presets, stores them locally and plays them even when you do not have access to your SoundBridge. You can also use FlexBridgeRadio to edit your Presets and send them back to your SoundBridge or to make a backup of your SoundBridge's Presets.

### Let Your Music Play!

But that's not all: FlexBridgeRadio can play your own music, too. Simply create playlist files which contain links to your MP3, AAC, WMA, FLAC or OGG Vorbis files and put these playlists into one or more of FlexBridgeRadio's 12 "My Music" Presets. And as FlexBridgeRadio can be run from a USB stick, you can use it to play your own music on every Windows PC without ever copying a single file to that computer.

### System Requirements

Intel Pentium III or equivalent processor; Microsoft Windows 2000 SP4, Windows XP SP2 or Windows Vista (GoldEdition: Windows XP SP2 or Windows Vista); Microsoft .NET 2.0 or higher; 512 MB of RAM; 3 MB of free space on a hard disk, USB stick or memory card; broadband internet connection.
